*A counterbrockage error involves a capped die and a previously struck coin. When a capped die strikes a previously struck coin, the obverse design from that struck coin will be impressed into the cap. The result will be a design where the cap face will be an incuse brockage. When a new blank is struck by this capped die with an incuse brockage image, the obverse will have a raised and spread image from that incuse design of the cap. This type of brockage impression is known as a counterbrockage.*

## Asia & Middle-East

2228. **VIET NAM (NORTH):** 5 hao, 1946, KM-2.2, Lecompte-4, struck in aluminum, value in relief, Brilliant UNC \$100 - 150

*Howard Daniel III believes that the 5 Hao type with value in relief were minted in Shanghai by the Chinese Communists for the Viet Minh in the mid to late 1950s and they were used by the Vietnamese Communists as presentation coins; they retained the date 1946. Not all of them might have been shipped to Viet Nam. It is very possible the excess were found at the mint and are now being disposed of onto the numismatic marketplace, as this type is nearly always found in uncirculated quality, while the value incuse type is rarely found in high quality and was likely struck locally in Vietnam for circulation.*
