1988. **SIKH EMPIRE:** AR rupee (10.45g), Peshawar, year 22/year 22, KM-733 (Afghan), A-3135 (Durrani), in the name of Ayyub Shah, with the regnal year 22 above the name Ayyub on obverse, the former position of the Hijri year, and on the reverse in the normal position, 1 small testmark, VF-EF, RRR \$200 - 400

The regular Sikh rupees of Peshawar (KM-98) were struck VS1891-94 (1834-37), to a standard of about 8.55g. I believe that the Ayyub year 11 rupees without Hijri date were then introduced at Peshawar, as a restoration of the previous nominal rupees struck before 1834 (weight standard about 10.6g). Moreover, the nominal Durrani Mahmud rupees of the nearby mint Derajat were last struck dated AH1252 (1836-37). It seems that the ongoing year 11 type was briefly replaced by this type, year 22 on both sides, as the 22nd regnal year of the by then deceased Ayyub would correspond to 1839-40, of which this piece is the first confirmed example, and the last silver coinage struck at Peshawar.

1989. **SIKH EMPIRE:** AE falus (7.93g), Peshawar, AH1246, KM—, Herrli—, in the name of the long deceased Taimur Shah / seven-petal flower within a heptafoil, mint & date around, apparently followed by the word 'aqebat, appears to be an unpublished variety, overstruck (as usual) on uncertain host, VF-EF, RR \$100 - 150

Although tentatively assigned to Alamgir II by Stevens, it is almost certainly Ahmad Shah, for whom the quarter rupee is unpublished. The emperor's name is almost completely off flan, but the bottom of the two middle letters is visible. Because the left part is rounded, rather than a sharp vertical line, it cannot be the bottom of the M of 'alam, but can only be the bottom of the H of shah. The right part is also rounded, and can only be the bottom of the 'ayn of 'alam or the bottom of sha or shah. Also, the space between the mint name and the line above it is rather broad, typical of Ahmad Shah, not of Alamgir II.
